This site complies with the HONcode standard for trustworthy health information: Hydrocodone and Guaifenesin
Generic Name: This medicine has an opioid drug in it. This is not a list of all drugs or health problems that interact with hydrocodone and guaifenesin. All drugs may cause side effects. Side effects that have happened include slowed or trouble breathing and deaths. Talk with the doctor. Hydrocodone is used in combination with other chemicals and is available in prescription pain medications as tablets, capsules and syrups. Do not start, stop, or change the dose of any drug your child takes without checking with the doctor. Avoid alcohol or other drugs and natural products that slow your actions. Mental dependence addiction is not likely to occur when narcotics are used for this purpose. When hydrocodone is used for a long time, it may become habit-forming, causing mental or physical dependence. The use of opioid drugs along with a benzodiazepine drug or other drugs that may make you drowsy or slow your actions has led to very bad side effects. Most painkillers also stimulate portions of the brain associated with pleasure. Flip through the Booklets. Hydrocodone belongs to the group of medicines called narcotic analgesics pain medicines. Physical dependence may lead to withdrawal side effects if treatment is stopped suddenly. Sales and production of this drug have increased significantly in recent years, as has its illicit use. If you have questions, talk with your doctor. The most commonly abused opioid painkillers include oxycodone, hydrocodone, meperidine, hydromorphone and propoxyphene. Among the many brands the dose of acetaminophen ranges between and mg, and the dose of hydrocodone ranges between and 10 mg. Vicodin was recently reformulated, and the acetaminophen component was reduced to mg in all preparations, however, generic formulations may still contain and ?What is hydrocodone ?What are the side effects of ?What is the dosage for.
