Capsules, tablets and powder for oral suspension of amoxicillin are intended for oral administration. Amoxicillin does not resist destruction by penicillinase; therefore, it is not effective against penicillinase-producing bacteria, particularly resistant staphylococci. Most of the amoxicillin is excreted in the urine unchanged. Tooth discoloration brown, yellow, or gray staining has been rarely reported. Amoxicillin is a semisynthetic penicillin and, therefore, has the potential for producing allergic reactions. Powder for Oral Suspension: It is often prescribed to treat bite wounds, bacterial dermatitis, dental infections, and infections of the respiratory tract, gastrointestinal tract and urinary tract. Each 5 mL of reconstituted suspension contains mg, mg, mg or mg amoxicillin as the trihydrate. Call your veterinarian for medical advice about any side effects to your pet. The following adverse reactions have been reported associated with the use of penicillins: The use of amoxicillin is contraindicated in dogs with a history of an allergic reaction to penicillin. Administer twice a day for 5 to 7 days. Most strains of the following gram-positive and gram-negative bacteria have demonstrated susceptibility to amoxicillin, both in vitro and in vivo: In the absence of such data, local epidemiology and susceptibility patterns may contribute to the empiric selection of therapy. Amoxicillin may be given without regard to meals because it is stable in gastric acid. After reconstitution with the required amount of water, each mL will contain 50 mg of amoxicillin as the trihydrate. Each capsule of Amoxicillin with blue cap and pink body, contains mg or mg Amoxicillin as the trihydrate. The body of the mg capsule is imprinted with 'A44' in black ink. The body of the mg capsule is imprinted with 'A45' in black ink. Inactive ingredients: microcrystalline cellulose, D&C Red No. 28, FD&C. Mar 29, - The drug is available under generic name Amoxicillin and commonly marketed under the brand name Amoxil.
